Principles of Macroeconomics - Douglas Curtis 2021

"Principles of Macroeconomics is an adaptation of the textbook, Macroeconomics: Theory, Markets, and Policy by D. Curtis and I. Irvine, and presents a complete and concise examination of introductory macroeconomics theory and policy suitable for a first introductory course. Examples are domestic and international in their subject matter and are of the modern era — financial markets, monetary and fiscal policies aimed at inflation and debt control, globalization and the importance of trade flows in economic structure, and concerns about slow growth and the risk of deflation, are included. This textbook is intended for a one-semester course, and can be used in a two-semester sequence with the companion textbook, Principles of Microeconomics. The three introductory chapters are common to both textbooks."--BCcampus website.

Contemporary Economic Theory - Andriana Vlachou 2016-07-27

Leading international scholars challenge neoliberalism on its assumptions, way of reasoning and empirical evidence. In particular, they discuss critically, from the standpoint of radical perspectives, the issues of limiting the state and privatization, inflation and unemployment, and the possibility of a socialist society. They also discuss the current project for the monetary and economic union (EMU) of Europe, considered as an application of neoliberalism. They assess and question the internal market, the common currency and central bank independence; and investigate alternatives to the EMU project and the marketization agenda.

Contending Economic Theories - Richard D. Wolff 2012-09-07

A systematic comparison of the three major economic theories, showing how they differ and why these differences matter in shaping economic theory and practice. Contending Economic Theories offers a unique comparative treatment of the three main theories in economics as it is taught today: neoclassical, Keynesian, and Marxian. Each is developed and discussed in its own chapter, yet also differentiated from and compared to the other two theories. The authors identify each theory's starting point, its goals and foci,

and its internal logic. They connect their comparative theory analysis to the larger policy issues that divide the rival camps of theorists around such central issues as the role government should play in the economy and the class structure of production, stressing the different analytical, policy, and social decisions that flow from each theory's conceptualization of economics. The authors, building on their earlier book *Economics: Marxian versus Neoclassical*, offer an expanded treatment of Keynesian economics and a comprehensive introduction to Marxian economics, including its class analysis of society. Beyond providing a systematic explanation of the logic and structure of standard neoclassical theory, they analyze recent extensions and developments of that theory around such topics as market imperfections, information economics, new theories of equilibrium, and behavioral economics, considering whether these advances represent new paradigms or merely adjustments to the standard theory. They also explain why economic reasoning has varied among these three approaches throughout the twentieth century, and why this variation continues today—as neoclassical views give way to new Keynesian approaches in the wake of the economic collapse of 2008.
