## **Working Memory and Second Language Learning** - Zhisheng (Edward) Wen 2016-06-06

This book introduces an approach to understanding and measuring working memory components and functions in second language learning, processing and development. It presents comprehensive, thorough and updated reviews of relevant literatures from cognitive sciences and applied linguistics. Drawing on multidisciplinary research, the book advocates a conceptual framework for integrating working memory theories with second language acquisition theories. An innovative theoretical model is also presented, which illuminates research studies investigating the distinctive roles of phonological and executive working memory as they relate to specific L2 learning domains, skills and processes. Theoretical and methodological implications of this integrative perspective are further elaborated and discussed within the specific realms of L2 task-based performance and language aptitude research.

This book brings together a diverse range of empirical chapters spanning various contexts and educational levels which explore the psychology of teaching and learning a subject through a second or other language. benefits and joys of being involved in such programmes. The studies encompass a range of areas, such as Content and Language Integrated Learning (CLIL), Foreign Language Medium of Instruction (FMI), bilingual education and other related approaches to integrating content and language. They feature a variety of psychological constructs, including identity, self-confidence, motivation, self-concept, teacher and learner beliefs, affect, anxiety, stress, mindsets, attributions and well-being, from the perspectives of both teachers and learners. This book is essential reading for anyone interested in ensuring that teachers and students are properly supported and that their experiences of integrated content and language settings enable them to flourish.

## **Educational Psychology** - Thomas Fetsco 2005

"I applaud the vision the authors had in synthesizing this information in a way that makes the reader more confident in their application of these theories and principles to their own classrooms. The authors have wonderfully succeeded in their attempt to integrate this material, in a manner quite different from other texts I've read or reviewed." Jim Persinger, "Emporia State University" "Any textbook that overemphasizes theory, neglects the real-world; any textbook that overemphasizes practice, neglects the underlying foundation of theory. This book strikes a careful balance between theory and practice by explicitly linking the two." Gregory Cutler, "Bay de Noc Community College" "By far, this is the best educational psychology text I have read because it integrates and applies major learning theories to many of the daily issues future teachers will face." Krista Robertson, "Rhode Island College" "I see this textbook as well written, informative, clearly and logically organized, and a very useful component for a course in Educational Psychology. I like it!" Raymond E. Webster, "East Carolina University" "The authors have done an excellent job in producing an easy-to-follow format and style." Paula Holmes Miller, "Crichton College" "The authors' writing style and presentation level are clear and easy to read, along with tables, figures, concept maps, and other visual aids." Yuliang Liu, Ph.D, "Southern Illinois University" "The text is well written and some very difficult topics such as Attribution Theory and Constructivism (to name just two) are easy to understand, when compared to similar books. I think this is some of the clearest writing I have read in a long time." Michael P. Verdi, "California State University San Bernadino" "I really enjoyed reading this text, and I found its comprehensive nature to be a strength." Linda W. Morse, "Mississippi State University" "The authors' writing style is clear, simple, and direct. It speaks directly to the reader . . . the examples are concrete and related to education." John Isch, "Martin Luther College"

*The Psychology of the Language Learner* - Zoltán Dörnyei 2014-04-04

Research results over the past decades have consistently demonstrated that a key reason why many second language learners fail--while some learners do better with less effort--lies in various learner attributes such as personality traits, motivation, or language aptitude. In psychology, these attributes have traditionally been called "individual differences." The scope of individual learner differences is broad--ranging from creativity to learner styles and anxiety--yet there is no current, comprehensive, and unified volume that provides an overview of the considerable amount of research conducted on various language learner differences, until now. Each chapter in this new volume focuses on a different individual difference variable. Besides a review of the relevant second language literature, Zoltán Dörnyei presents a concise overview of the psychological research involving each topic. A key concern for the author has been to define the various learner factors as measurable constructs and therefore the discussion includes a summary of the most famous tests and questionnaires in each domain. A wide range of readers will benefit from this book--students in linguistics, applied linguistics, modern languages, and psychology programs; second language teachers participating in in-service training courses; and researchers in second language acquisition and psychology.

*Integrative Approaches to Psychology and Christianity, Third Edition* - David N. Entwistle 2015-06-30

"As disciplines, psychology and theology share an overlapping interest in the nature and functioning of human beings. This book is ideal as a textbook for students of psychology and other behavioral and social sciences (social work, sociology, theology, counseling, pastoral counseling) at both the graduate and undergraduate level. It is also written for the broader readership of psychologists, counselors, pastors, and others who are interested in integration"--Publisher description.

High-interest boxes including the Biopsychology of Childhood, Evolution in Action, and Socioculturally Speaking appear in rotation throughout the chapters to add both depth and dimension to the presentation of the text's comprehensive core content and featured perspectives. A rich set of pedagogical resources in the text itself and throughout its dynamic suite of online and print supplements helps to ensure that this text engages, enlightens, and challenges students in unique ways. *Semiotic Psychology* - Norman Markel 1998

"Semiotic Psychology" is a special and selective history that focuses on naturally occurring language and its meanings. A review of classic studies from the 1930s through the 1950s shows how content analysis can examine discourse as diverse as plays and psychiatric interviews. This book provides the foundations of semiotic psychology, including its methodological and theoretical origins in psychology and anthropological linguistics, and illuminates the impact of cultural forces on thinking, emotion, attitude, and communication. It draws together the major threads underlying classic studies in the field, integrating theories that may never have appeared together previously. "Semiotic Psychology" will be of interest to semioticians, sociologists, social and clinical psychologists, linguistic anthropologists, cognitivists, and social scientists utilizing content analysis.

**Creating Language** - Morten H. Christiansen 2018-04-20

A work that reveals the profound links between the evolution, acquisition, and processing of language, and proposes a new integrative framework for the language sciences. Language is a hallmark of the human species; the flexibility and unbounded expressivity of our linguistic abilities is unique in the biological world. In this book, Morten Christiansen and Nick Chater argue that to understand this astonishing phenomenon, we must consider how language is created: moment by moment, in the generation and understanding of individual utterances; year by year, as new language learners acquire language skills; and generation by generation, as languages change, split, and fuse through the processes of cultural evolution. Christiansen and Chater propose a revolutionary new framework for understanding the evolution, acquisition, and processing of language, offering an integrated theory of how language creation is intertwined across these multiple timescales. Christiansen and Chater argue that mainstream generative approaches to language do not provide compelling accounts of language evolution, acquisition, and processing. Their own account draws on important developments from across the language sciences, including statistical natural language processing, learnability theory, computational modeling, and psycholinguistic experiments with children and adults. Christiansen and Chater also consider some of the major implications of their theoretical approach for our understanding of how language works, offering alternative accounts of specific aspects of language, including the structure of the vocabulary, the importance of experience in language processing, and the nature of recursive linguistic structure.

*Cerebellum and Cerebrum in Homeostatic Control and Cognition* - Eric Parkins 2021-11-23

*Cerebellum and Cerebrum in Homeostatic Control and Cognition* presents a ground-breaking hybrid-brain

psychology, proposing that the cerebellum and cerebrum operate in a complementary manner as equal cognitive partners in learning based control. The book synthesises contemporary neuroscience and psychology in terms of their common underlying control principle, homeostasis. Drawing on research and theory from neuroscience, psychology, AI and robotics, it provides a hybrid control systems interpretation of consciousness and self; unconscious mind; REM dream sleep; emotion; self-monitoring and self-control; memory, infantile amnesia; and, cognitive development. This is used to investigate different elements of cerebellum-cerebrum offline interaction; including attention and working memory, and explores cerebellar and cerebral contributions to various aspects of a number of disorders; including ADHD, ASD and schizophrenia. Presenting original ideas around neuropsychological architecture, the book will be of great interest to academics, researchers, and post-graduate students in the fields of neuropsychology, cognitive psychology, neuroscience and clinical psychology.

**Integrative Assessment in Clinical Psychology** - Andrew J. Lewis 2010

This book demonstrates an integrated model of clinical psychology practice where disorders are understood as the outcome of multiple interacting factors across different levels of analysis: biological, psychological and psycho-social. Using real-life case studies with expert analysis and interpretation by leading clinical psychologists and educators, the chapters presented in this book show how the planning of intervention needs to be informed by the available evidence. This integrated model allows interventions to be individually tailored rather than offered as a 'one size fits all' approach, placing greater emphasis on rigorous assessment as one of the core clinical skills and distinguishing features of a clinical psychologist. The integrated approach to clinical assessment is a prerequisite to an integrated approach to psychological therapy. Increasingly clinical psychologists are able to employ integrated forms of psychological therapy as the field comes to accept both the strengths and limitations of cognitive, behavioural, humanistic, psychodynamic and systemic approaches. Integration in contemporary approaches such as Mentalisation Based Therapy (MBT), Acceptance and Commitment Therapy (ACT) or Schema Focused Therapy (SFT) are good examples of the blending and integration characteristic of contemporary practice. The case studies in this book cover a range of disorders, including substance abuse, depression, childhood depression, eating disorders, borderline personality disorder, obsessive behaviours, attachment disorder, sexual offending, dementia, learning difficulties and schizophrenia. An invaluable resource for all clinical psychology students as well as practising clinicians.

**Language Teacher Psychology** - Sarah Mercer 2018-01-05

To date, the majority of work in language learning psychology has focused on the learner. In contrast,

relatively little attention has been paid to teacher psychology. This volume seeks to redress the imbalance by bringing together various strands of research into the psychology of language teachers. It consists of 19 contributions on well-established areas of teacher psychology, as well as areas that have only recently begun to be explored. This original collection, which covers a multitude of theoretical and methodological perspectives, makes a significant contribution to the emerging field of language teacher psychology as a domain of inquiry within language education.

*Environment, Cognition, and Action* - Tommy Garling 1992-01-16

How do human beings comprehend, evaluate, and utilize the physical environments they inhabit? In this edited volume, a distinguished group of international contributors examines in detail the interconnections between what we know about, feel, and hope to accomplish in real world environments. Psychologists, planners, architects, and geographers discuss the state of knowledge in environmental cognition, building and landscape assessment, aesthetics, and decision-making. **SLA Applied** - Brian John Tomlinson 2021-02-28

This singular new textbook is both an introduction to the major theories of second language acquisition and a practical proposal for their application to language learning courses. It explains and evaluates these theories, and focuses on recent research that has enriched thinking about the best ways to facilitate communicative effectiveness in an L2. It then suggests practical applications regarding language planning, curriculum development, pedagogy, materials development, teacher development, and assessment, establishing a tangible connection between theory and practice. Unlike many SLA books which are narrowly focused on the acquisition of language, it explores the roles of factors such as pragmatics, para-

linguistic signals, gesture, semiotics, multi-modality, embodied language, and brain activity in L2 communication. SLA Applied connects research-based theories to the authors' and students' real-life

experiences in the classroom, and stimulates reflection and creativity through the inclusion of Readers' Tasks in every chapter. This engaging and relevant text is suitable for students in Applied Linguistics or TESOL courses, trainee teachers, researchers, and practitioners.
