The Lord's Supper in Anabaptism - John D. Rempel 1993

In this study John Rempel shows how the eucharistic theologies of Hubmaier, Marpeck, and Dirk issue from their different pictures of Christ. Their approaches to the Lord's Supper are shaped by attempts to defend the Anabaptist Supper against both sacramentalism and spiritualism.

Practical Physical Chemistry - B Viswanathan 2005-01-01

The authors have examined carefully a number of Indian Universities and evolved a common minimum laboratory programme and the result is this compilation. The experiments chosen are the minimum required for undergraduate programmes. Some experiments have been purposely included so that they can be covered at demonstration level and can be given as exercises at the post graduate level. The authors have attempted to assemble the list of experiments from their experience and also have drawn upon the experience of the students who have undergone these laboratory courses and felt the inadequacy of the existing curriculum.

Handbook of Foodborne Diseases - Dongyou Liu 2018-09-03

Clearly linked to consumption of foods, beverages, and drinking water that contain pathogenic microbes, toxins, or other toxic agents, foodborne diseases have undergone a remarkable change of fortune in recent decades, from once rare and insignificant malaises to headline-grabbing and deadly outbreaks.

Unquestionably, several factors have combined to make this happen. These include a prevailing demand for the convenience of ready-to-eat or heat-and-eat manufactured food products that allow ready entry and survival of some robust, temperature-insensitive microorganisms; a drastic reduction in the costs of air, sea, and road transportation that has taken some pathogenic microorganisms to where they were absent previously; an expanding world population that has stretched the boundary of human activity; and an ageing population whose weakened immune functions provide a fertile ground for opportunistic pathogens to invade and thrive. Given the diversity of causative agents (ranging from viruses, bacteria, yeasts, filamentous fungi, protozoa, helminthes, toxins, to toxic agents), and the ingenuity of pathogenic microbes to evolve through genetic reassortment, horizontal gene transfer, and/or random genetic mutation, it has become an enormous challenge to understand how foodborne agents are able to evade host immune defenses and induce diseases, and also to develop and apply innovative approaches for improved diagnosis, treatment, and prevention of foodborne diseases. Handbook of Foodborne

Diseases summarizes the latest findings on more than 100 foodborne diseases and their causative agents. With contributions from international experts on foodborne pathogens, toxins, and toxic agents research, this volume provides state-of-the-art overviews on foodborne diseases in relation to their etiology, biology, epidemiology, clinical presentation, pathogenesis, diagnosis, treatment, and prevention. Apart from offering a comprehensive textbook for undergraduate and postgraduate students in food, medical, and veterinary microbiology, this volume constitutes a valuable reference on foodborne diseases for medical professionals and health authorities, and forms an informative educational resource for the general public.

The Slaves - Frederick Douglass 2016-12-16
"The Slaves" is nothing but Frederick Douglass's groundbreaking autobiography and his first book "Narrative of the Life of Frederick Douglass, An American Slave, written by Himself". We have renamed the title here as "The Slaves" to keep the title short as well as to establish that Frederick Douglass is no longer a name of a particular slave born in nineteenth-century America, but a name that represents slaves of the entire world and of all time. Even though, we do not wish anyone to be born into slavery anymore like Frederick was, we have taken him as a symbol of all the slaves as a wish that all who are still in slavery may have the spirit of Frederick Douglass and fight their ways to the freedom and work to free other slaves to make the slavery history. The life of Frederick, in one way or another, is the lives of all other slaves. Hence, we have named this version of his book "The Slaves".

Zwingli and Bullinger - Ulrich Zwingli 1953-01-01
Selections from the writings of Ulrich Zwingli and Heinrich Bullinger, two lesser-known church

reformers, are contained in this volume. Also included is an account of the life, work, and theology of each of these Swiss reformers of the sixteenth century. Long recognized for the quality of its translations, introductions, explanatory notes, and indexes, the Library of Christian Classics provides scholars and students with modern English translations of some of the most significant Christian theological texts in history. Through these works--each written prior to the end of the sixteenth century--contemporary readers are able to engage the ideas that have shaped Christian theology and the church through the centuries.

The Radical Reformation - George Huntston Williams 2000

George Williams' monumental *The Radical Reformation* has been an essential reference work for historians of early modern Europe, narrating in rich, interpretative detail the interconnected stories of radical groups operating at the margins of the mainline Reformation. In its scope--spanning all of Europe from Spain to Poland, from Denmark to Italy--and its erudition, *The Radical Reformation* is without peer. Now in paperback format, Williams' magnum opus should be considered for any university-level course on the Reformation.

Writing and Renunciation in Medieval Japan - Rajyashree Pandey 2020-06-01

This is the first monograph-length study in English of Kamo no Chōmei, one of the most important literary figures of medieval Japan. Drawing upon a wide range of writings in a variety of genres from the Heian and Kamakura periods, Pandey focuses on the terms *kyōgen kigo* (wild words and fancy phrases), *shoji soku nehan* (samsara is nirvana), *hōben* (expedient

means), and suki (single-minded devotion to an art). She shows how these terms deployed by writers in an attempt to reconcile literary and artistic activities with a commitment to Buddhism. By locating Chōmei within this broad context, the book offers an original reading of his texts, while at the same time casting a light upon intellectual preoccupations that were central to the times. *Writing and Renunciation in Medieval Japan* is an important contribution to a growing body of work that challenges the rigid distinction between the religious and literary—a distinction that would have made little sense to medieval writers, many of whom were poets as well as priests—and sheds light on the particular ways in which a religio-aesthetic tradition came to be articulated in medieval Japan. Through an examination of records left by Chōmei's contemporaries, the book also traces the life of Chōmei, particularly his activities as a court poet and the circumstances that led to his taking the tonsure.

Fundamental Concepts of Biology - Nicola Galecki 2020-09-08

Biology is a branch of natural science which deals with the study of life and living organisms. It focuses on their physical structure, molecular interactions, physiological mechanisms, chemical processes, development and evolution. It considers cells as the fundamental unit of life and genes as the basic unit of heredity. It also perceives evolution as the force that is responsible for the creation and extinction of species. There are a number of sub-disciplines within biology such as theoretical biology and experimental biology. Theoretical biology uses mathematical methods for the formulation of quantitative models. Experimental biology conducts empirical experiments for testing the validity of proposed theories and understanding the mechanisms underlying life. This textbook is a valuable compilation of topics, ranging from the basic to the most complex theories and principles in the field of biology. Some of the diverse topics covered herein address the varied branches that fall under this category. Those in search of information to further their knowledge will be greatly assisted by this book.

Building the National Parks - Linda Flint McClelland 1998

The Office of Strategic Services, the forerunner of the Central Intelligence Agency, was founded in 1942 by William 'Wild Bill' Donovan under the direction of President Roosevelt, who realized the need to improve intelligence during wartime.

A rigorous recruitment process enlisted agents from both the armed services and civilians to produce operational groups specializing in different foreign areas including Italy, Norway, Yugoslavia and China. At its peak in 1944, the number of men and women working in the service totaled nearly 13,500. This intriguing story of the origins and development of the American espionage forces covers all of the different departments involved, with a particular emphasis on the courageous teams operating in the field. The volume is illustrated with many photographs, including images from the film director John Ford who led the OSS Photographic Unit and parachuted into Burma in 1943.

Though the format evolved in the first edition remains intact, relevant new additions have been inserted at appropriate places in various chapters of the book. Also included are a number of sample and study problems at the end of each chapter to illustrate the approach to problem solving that involve translations of sets of spectra into chemical structures. Written primarily to stimulate the interest of students in spectroscopy and make them aware of the latest developments in this field, this book begins with a general introduction to electromagnetic radiation and molecular spectroscopy. In addition to the usual topics on IR, UV, NMR and Mass spectrometry, it includes substantial material on the currently useful techniques such as FT-IR, FT-NMR, ¹³C-NMR, 2D-NMR, GC/MS, FAB/MS, Tandem and Negative Ion Mass Spectrometry for students engaged in advanced studies. Finally it gives a detailed account on

Optical Rotatory Dispersion (ORD) and Circular Dichroism (CD).

A Digitized Systematic Classification for Ecosystems - David Earl Brown 1980

Human Aging - Paul W. Foos 2016-01-08
This text offers a readable and friendly presentation of the important methods, findings, and theories of human aging, while actively involving the reader in meaningful exercises and critical thinking. Students are repeatedly challenged to apply information in the text to the older adults in their own lives. Specifically, suggestions for enhancing the lives of their older relatives are offered and encouraged. These include guidelines for discussions they might have regarding social, emotional, and environmental changes as well encouraging intellectual and social interaction. In this Edition: Emphasis on the science of the study of aging and why questions in aging are difficult to answer, how social scientists attempt to handle such difficulties, and the successes and failures social scientists have had thus far in answering those questions. The text also demonstrates how current research findings are now being applied in the real world and/or how they might be applied in the future. Cross-cultural comparisons and ethnic group comparisons are included wherever possible. Each chapter begins with "Senior View," which introduces students to a real person and gives them a chance to hear what older adults think and say about important issues related to the chapter and a chance to compare those opinions to the research findings. Each chapter ends with "Making Choices," emphasizing the important behavioral, emotional, and social choices that students can make now to prolong a healthy, happy life. "Chapter Projects" offer the opportunity for active learning, as students investigate for themselves an issue related to the chapter. Instructors can expand these projects for students who want to learn more, or for independent study. "Focus on Aging" boxes compliment the material in the text, providing additional insight and examples, and encouraging critical thinking. Every chapter includes discussion questions, study questions, chapter exercises, and related online resources.
