Social Psychology, Third Edition - Paul A. M. Van Lange 2022-04-21

This definitive work--now extensively revised with virtually all new chapters--has introduced

generations of researchers to the psychological processes that underlie social behavior. What sets the book apart is its unique focus on the basic principles that guide theory building and

research. Since work in the field increasingly transcends such boundaries as biological versus cultural or cognitive versus motivational systems, the third edition has a new organizational framework. Leading scholars identify and explain the principles that govern intrapersonal, interpersonal, intragroup, and intergroup processes, in chapters that range over multiple levels of analysis. The book's concluding section illustrates how social psychology principles come into play in specific contexts, including politics, organizational life, the legal arena, sports, and negotiation. New to This Edition *Most of the book is entirely new. *Stronger emphasis on the contextual factors that influence how and why the basic principles work as they do. *Incorporates up-to-date findings and promising research programs. *Integrates key advances in such areas as evolutionary theory and neuroscience.

Handbook of Theories of Aging, Second

Edition - Merrill Silverstein, PhD 2008-10-27

The field of gerontology has often been criticized for being "data-rich but theory-poor." The editors of this book address this issue by stressing the importance of theory in gerontology. While the previous edition focused on multidisciplinary approaches to aging theory, this new edition provides cross-disciplinary, integrative explanations of aging theory: The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in adjacent fields in studying aging and age-related phenomena. This edition of the Handbook consists of 39 chapters written by 67 internationally recognized experts in the field of aging. It is organized in seven sections, reflecting the major theoretical developments in gerontology over the past 10 years. Special Features: Comprehensive coverage of aging theory, focusing on the biological, psychological, and social aspects of aging A section dedicated to discussing how aging theory informs public

policy A concluding chapter summarizing the major themes of aging, and offering predictions about the future of theory development Required reading for graduate students and post doctoral fellows, this textbook represents the current status of theoretical development in the study of aging.

Homicide - Sara Skott Söderholm 2022-07-15

Homicide: Towards a Deeper Understanding offers an in-depth analysis into the phenomenon of homicide, examining different types of homicide and how these types have changed

over time. Based on original analysis on Scottish data, this book draws upon an international body of research to contextualize the findings in a global setting, filling an important gap in the homicide literature pertaining to the relationship between trends in homicide and violence. Examining homicide from gendered as well as Gothic perspectives, this book also relates homicide to novel, critical theory. The book covers a thorough description of different types of homicide, including sexual homicide, and provides an explorative approach to the identification of homicide subtypes. The book also explores how these findings relate to current homicide theory, and proposes a new theoretical framework to gain a deeper understanding of this crime. The main argument of the book is that if homicide and its relationship to wider violence is to be fully understood, theoretically as well as empirically, this crime needs to be disaggregated in a way that reflects the underlying data. Overall, this

book therefore fills an important gap in criminological literature, providing an in-depth understanding of one of the most serious violent crimes.

Pandemics, Politics, and Society - Gerard Delanty 2021-02-22

This volume is an important contribution to our understanding of global pandemics in general and Covid-19 in particular. It brings together the reflections of leading social and political scientists who are interested in the implications and significance of the current crisis for politics and society. The chapters provide both analysis of the social and political dimensions of the Coronavirus pandemic and historical contextualization as well as perspectives beyond the crisis. The volume seeks to focus on Covid-19 not simply as the terrain of epidemiology or public health, but as raising fundamental questions about the nature of social, economic and political processes. The problems of contemporary societies have become intensified

as a result of the pandemic. Understanding the pandemic is as much a sociological question as it is a biological one, since viral infections are transmitted through social interaction. In many ways, the pandemic poses fundamental existential as well as political questions about social life as well as exposing many of the inequalities in contemporary societies. As the chapters in this volume show, epidemiological issues and sociological problems are elucidated in many ways around the themes of power, politics, security, suffering, equality and justice. This is a cutting edge and accessible volume on the Covid-19 pandemic with chapters on topics such as the nature and limits of expertise, democratization, emergency government, digitalization, social justice, globalization, capitalist crisis, and the ecological crisis. Marginality and Condemnation, 3rd Edition - Carolyn Brooks 2021-12-13T00:00:00Z

**Includes test bank and PowerPoint slides for professors who have adopted the text in their course. Contact info@fernpub.ca for more information. ** This well-received criminology textbook, now in its third edition, argues that crime must be understood as both a social and a political phenomenon. Using this lens, Marginality and Condemnation contends that what is defined as criminal, how we respond to "crime" and why individuals behave in anti-social ways are often the result of individual and systemic social inequalities and disparities in power. Beginning with an overview of criminological discourse, mainstream

approaches and new directions in criminological theory, the book is then divided into sections, based on key social inequalities of class, gender, race and age, each of which begins with an outline of the general issues for understanding crime and an introduction that guides readers through the empirical chapters that follow. The studies provide insights into general issues in criminology, ranging from the historical and current nature of crime and criminal justice to the various responses to criminality. Readers are encouraged and challenged to understand crime and justice through concrete analyses rather than abstract argumentation. In addition to a new introductory chapter that confronts how we define crime, measure crime, and understand and use criminology in this millennium, the third edition provides new chapters examining crime in relation to the environment, terrorism, masculinity, children and youth, and Aboriginal gangs and the legacy of colonialism.

The education debate (second edition) - Ball, Stephen J. 2013-03-13

Education was a key political issue for New Labour (1997-2010) and continues to be so under the Coalition government (2010-). It is seen as a crucial factor in ensuring economic productivity and competitiveness, in generating social mobility and tackling social inequality - but are these goals either feasible or

compatible? In this fully updated edition of this bestselling book, Stephen J. Ball, a leading author in the field, guides us through the flood of government initiatives and policies of the past 20 years, including the Academies programme, parental choice, Free schools, National Curriculum and teaching standards. He looks at how these policy interventions have changed the landscape and meaning of education, turned children into 'learners' and parents into 'consumers', and played their part in the re-formation of contemporary governance. This authoritative and accessible book uses Ball's sociological approach to the analysis of current policies and ideas around education to address issues of class, choice, globalisation, race and citizenship, as well as the conflicting needs of children and families on the one hand and the economy and the state on the other.

Lesbian and Gay Foster Care and Adoption, Second Edition - Janet McDermott 2018-07-19
Featuring a spectrum of families from diverse

backgrounds, this book reveals the joys and challenges of adoptive and foster parenting. The authors outline how the experience of adopting and fostering has changed for lesbian, gay, bisexual and transgender (LGBT) people over the years, major changes in policy, and what the research can tell us about LGBT parenting. They interview families involved at different stages of the fostering and adoption process, from those undergoing assessments through to the experienced foster carers and adopters who were interviewed for the first edition of this book 20 years previously. While the number of LGBT people adopting or fostering has increased since then, some of the very real challenges still endure - including social stigma, homophobia and discriminatory policies - and families share some of the strategies they have used to help to address them. This is an essential source of information and advice for same-sex couples and LGBT single parents, as well as social workers, social work educators, sociologists of personal

life, fostering and adoption panel members.

Aging and the Art of Living - Jan Baars

2012-08-20

In this deeply considered meditation on aging in Western culture, Jan Baars argues that, in today's world, living longer does not necessarily mean living better. He contends that there has been an overall loss of respect for aging, to the point that understanding and "dealing with" aging people has become a process focused on the decline of potential and the advance of disease rather than on the accumulation of wisdom and the creation of new skills. To make his case, Baars compares and contrasts the works of such modern-era thinkers as Foucault, Heidegger, and Husserl with the thought of Plato, Aristotle, Sophocles, Cicero, and other Ancient and Stoic philosophers. He shows how people in the classical period—less able to control health hazards—had a far better sense of the provisional nature of living, which led to a philosophical and religious emphasis on cultivating the art of living and the idea of wisdom. This is not to say that modern society's assessments of aging are insignificant, but they

do need to balance an emphasis on the measuring of age with the concept of "living in time." Gerontologists, philosophers, and students will find Baars' discussion to be a powerful, perceptive conversation starter. -- W. Andrew Achenbaum, author of *Older Americans, Vital Communities*

Doing Mathematics - Martin H Krieger

2015-01-15

Doing Mathematics discusses some ways mathematicians and mathematical physicists do their work and the subject matters they uncover and fashion. The conventions they adopt, the subject areas they delimit, what they can prove and calculate about the physical world, and the analogies they discover and employ, all depend on the mathematics — what will work out and what won't. The cases studied include the central limit theorem of statistics, the sound of the shape of a drum, the connections between algebra and topology, and the series of rigorous proofs of the stability of matter. The many and varied solutions to the two-dimensional Ising model of ferromagnetism make sense as a whole when they are seen in an analogy developed by Richard Dedekind in the 1880s to algebraicize Riemann's function theory; by Robert Langlands'

program in number theory and representation theory; and, by the analogy between one-dimensional quantum mechanics and two-dimensional classical statistical mechanics. In effect, we begin to see "an identity in a manifold presentation of profiles," as the phenomenologists would say. This second edition deepens the particular examples; it describe the practical role of mathematical rigor; it suggests what might be a mathematician's philosophy of mathematics; and, it shows how an "ugly" first proof or derivation embodies essential features, only to be appreciated after many subsequent proofs. Natural scientists and mathematicians trade physical models and abstract objects, remaking them to suit their needs, discovering new roles for them as in the recent case of the Painlevé transcendents, the Tracy-Widom distribution, and Toeplitz determinants. And mathematics has provided the models and analogies, the ordinary language, for describing the everyday world, the

structure of cities, or God's infinitude.

by Martin Krieger is truly a masterpiece. He has not only explained ways of doing mathematical work to aspiring mathematicians and the intelligent laymen, but has also shown how various pieces of research work are related to each other. Even experts may not have realized such inter-relations. The cases studied include, especially, the stability of matter and the Ising model, two topics of great depth. Such clear explanations cannot be found anywhere else. Furthermore, his style of writing makes the book exceptionally enjoyable to read." T T Wu Gordon McKay Professor of Applied Physics Professor of Physics, Harvard University, USA "This is the first time I have seen a mathematician deal substantively with the issue of mathematics as culturally based, and he does it superbly and mathematically ... Although this book is no easy read, it is well worth the effort, and I am sure it will stimulate and inform, perhaps even surprise, the most sophisticated of mathematical readers. It is refreshing to find such a book being

published." Mathematical Reviews "Both challenging and provocative reading, *Doing Mathematics* sheds bright light on some of the main characteristics of the mathematical quest." Library of Science "Krieger has made some effort to accommodate different levels of readers; for example, structuring his text so that lay readers are alerted to sections that can be safely skipped and paragraphs that provide nontechnical summaries." A Comparative Study of Funding Shareholder Litigation - Wenjing Chen 2017-04-25

This book studies the funding problems with shareholder litigation through a functionally comparative way. In fact, funding problems with shareholder lawsuits may largely discourage potential shareholder litigants who bear high

financial risk in pursuing such a claim, but on the other hand they may not have much to gain. Considering the lack of incentives for potential shareholder claimants, effective funding techniques should be in place to make shareholder actions function as a corporate governance tool and discipline corporate management. The book analyzes, among others, the practice of funding shareholder litigation in the Australia, Canada, the UK, the US and Israel, and covers all of the typical approaches being used in financing shareholder litigation in the current world. For instance, Israel and Canada (Quebec and Ontario) are probably unique in having a public funding mechanism for derivative actions and class actions, while Australia is the country where third party litigation funding is originated and is growing rapidly. Based on this comparative research, the last part of this book discusses how to fund shareholder litigation in China in context of its social and legal background and what kind of

problems need to be solved if certain funding techniques are used.

Capitalism and Citizenship - Kathryn Dean
2012-11-12

Can capitalism and citizenship co-exist? In recent years advocates of the Third Way have championed the idea of public-spirited capitalism as the antidote to the many problems confronting the modern world. This book develops a multi-disciplinary theory of citizenship, exploring the human abilities needed for its practice. It then argues that capitalism impedes the nurturing of these abilities. In advancing these arguments, Kathryn Dean draws on the work of a wide range of thinkers including Freud, Marx, Lacan, Habermas and Castells.
