**Mirror to Physiology** - Ralph W Gerard 2013-05-27

This is a motley document, the product of many, presented for what it is. Fondly conceived as another Flexner report, it lacked a Flexner to

produce it. The excitement of planning by varied committees was not always maintained through execution; communication, necessarily difficult, was strained by important changes in operating staff; questions were forgotten by the time answers became available; too much was undertaken with inadequate experience and funds (large though the support seemed); multiple purposes and distributed responsibility caused confusion and delay; the inevitable and evitable hazards of an extended undertaking exacted their full toll. As a result, the report is seriously late in appearing, and it lacks important portions of the anticipated perspectives along time and across disciplines. But high devotion and hard labor have been poured into the mold, and the finished creation is not without merit. The Survey did pioneer in formulating a study of a profession, and its struggles have supplied both guidance and warning to many followers. It did amass great chunks of new data, collate older information, and make interpretations of the whole which have been put to use long before this report was completed. And it did catalyze much other successful activity, especially in the area of education, by the American Physiological Society and its sister organizations and by agents of other interests, from mathematics to medical schools.

In recent years, the importance of the microflora has inspired a great deal of research based on the tools of modern molecular biology, microbiology and medicine. The purpose of this profoundly multidisciplinary volume is to provide a comprehensive up-to-date review of what is known about the gut microflora and its impact on digestive physiology and pathology for all those interested in this fascinating subject.
