Shipping Operations Management - I.D. Visvikis 2017-10-09

This book focuses on the management of ship operations, an activity that requires integrative knowledge and technical expertise that spans various disciplines. As such, ship operations personnel are expected to be well-versed with aspects of management, economics, engineering, technology and law. Further, ship operations management requires the ability to identify and neutralize threats and to manage risks and make decisions that will optimize costs and contribute to performance improvements. Despite the fundamental nature of ship operations management, no book has ever attempted to reconcile and compile a comprehensive body of knowledge, while pursuing a coherent, structured and systematic approach. This edited volume addresses that fundamental gap in the extant literature, and brings together a wealth of knowledge from experts in their respective fields. Concretely, it explores issues of organization, technical management, crewing and behavioral issues, chartering and post fixture, risk management, finance, legal aspects of international conventions and regulations, attainment of safety, security and marine insurance, as well as ocean governance and sustainability. As such, the book offers a vital reference guide for maritime companies and organizations, while also serving as a teaching supplement in academic and professional maritime programmes.

The Bill of Lading - Frank Stevens 2017-12-14

The carriage of goods by sea starts off with a contract of carriage, an essentially simple and straightforward contract between two parties, the shipper and the carrier. Very often, however, a bill of lading is issued and a third party appears on the scene: the holder of the bill of lading. The holder was not involved in the making of the contract of carriage, but does have rights, and possibly obligations, against the carrier at destination. The question then is how the third-party holder of the bill acquires those rights and obligations. Analysing the different theories that have been proposed to explain the position of the third party holder, this book makes a distinction between contractual theories and non-contractual theories to explain the holder's position. Contractual theories build on the initial contract of carriage and apply contract law mechanisms while non-contractual theories construe the position of the third-party holder independently. Following the analysis and appraisal of the different theories, this book makes the case that the position of the third-party holder of the bill of lading is not obvious or self-evident; and submits that a statutory approach to the position of the holder of the bill of lading has advantages and would be preferable.
